

Write your reflections on the above tasks. Also, briefly explain which Vue 3 concepts you implemented in the Todo App.

I find this task quite interesting. I learned many new things in this assignment. Vue 3's system is used to update the UI whenever the data changes. In todo app, I used reactive properties to store and update the todo list. The composition API is a new way of organizing code in Vue 3. I used the composition API to create reusable functions for adding and removing tools. Directives are special attributes that can be added to HTML elements in Vue 3. They allow developers to add behaviors to elements.
